

eNGAge - Solution Submission

NGA is looking to the future. We know that some of the People Solutions, the exchanges of talent that we need – new people and new ideas – are outside of NGA. We hope both traditional and non-traditional partners (industry and academic institutions) will look at our broad challenges and also our specific requirements posted on the GEOINT Solutions Marketplace and propose great People Solution ideas here.

Do you have a submission for a People Solution for consideration – an idea for an exchange of talent (either we send to you, or you send to us, or both) to support resolving current or emerging problems or connecting on current or future capabilities? **To submit your solutions, please fill out this form and send it to eNGAge@nga.mil.**

In your solution submission, we want to understand what you do and how you do it, and how we can both benefit from an exchange of talent – learn new things and foster fresh perspectives.

To help you tell the story of how an exchange could work between your company or academic institution and NGA, we'd like you to provide a People Solution idea by answering the questions below. Please be precise and use plain English—your information will be shared with people throughout NGA, not just technology engineers. We want your People Solution idea to get attention and spark interest inside NGA.

Please keep it unclassified, high level, and descriptive. Your submission may lead to follow up discussions as we evaluate exchange ideas for relevance to mission, and current and future requirements. We may ask you for a follow-on virtual or in-person conversation.

If you have any questions, contact us at eNGAge@nga.mil.

Questions:

1. What is the name of your company or academic institution and what is your mission?
Who is the point of contact and how can we contact them?

UNCLASSIFIED

2. Are you interested in hosting a member of Team GEOINT at your company or academic institution, or sending one to temporarily join Team GEOINT?
3. Where are you located? And where would the proposed talent exchange take place?
4. Which specific requirement or broad challenge posted on our information page would this talent exchange support?
 - a. For specific requirements, what talent exchange do you propose to meet the stated problem or capability requirement?

UNCLASSIFIED

UNCLASSIFIED

- b. For broad challenges, what is the current or emerging problem or current or future capability that your proposed talent exchange would support? Who do you see as the users of the capability and how do you see it being used at NGA?

UNCLASSIFIED
